

TECH SHEET – WRAP TEXTURE KIT

Materika™ Digital Textures by Frank Ricci Design

This document provides technical information and usage guidelines for all wrap textures included in the “Wrap Texture Kit” by Frank Ricci Design / Materika Digital.

FILE SPECIFICATIONS (TIFF)

Property	Value
Width:	5080 mm
Height:	1495 mm
Resolution:	150 PPI
Color Mode:	RGB Color
Bit Depth:	8 bit
Color Profile:	Adobe RGB (1998)
Pixel Aspect Ratio:	Square pixels
Image Compression:	LZW
Pixel Order:	Interleaved (RGBRGB)
Byte Order:	PC IBM
Layer Compression:	ZIP – Delete layers + save copy

PRINTING WITH RIP SOFTWARE

- These files are provided in RGB TIFF format to ensure better control over the vibrancy of colors.
- Make sure to use a RIP software that correctly handles RGB TIFFs.
- Do not convert to CMYK before printing. The color profile (Adobe RGB 1998) ensures optimal compatibility with most wide-format RIP workflows.

TIPS & TRICKS

- For best results, print the texture on special effect vinyls such as:
 - Metallic
 - Pearl
 - Iridescent
 - Satin or Brushed finishes
- Try combining transparent overlaminates with different textures to further enhance the final result.
- Always perform a test print to evaluate ink behavior and color rendering on your specific film.
